

Laborator 3

1) a) Un lant hamiltonian este un lant elementar care trece prin toate nodurile unui graf o singura dată. Deoarece nodurile 1-3-6 sunt legate de graf decât printr-o singură muchie prin urmare nu este posibil un lant hamiltonian.

(b) ~~DFS [1, 7, 2, 4, 3, 6, 5]~~

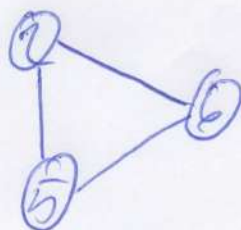

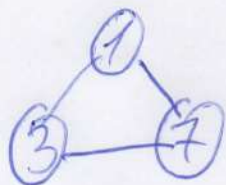

b) DFS [1, 7, 2, 5, 4, 3, 6]

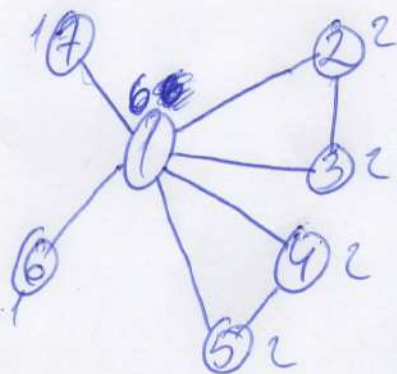

c) Grafatul G este un graf conex deoarece este conectat cu toate nodurile

d) Muchi critice [4, 3], [1, 7], [2, 6]

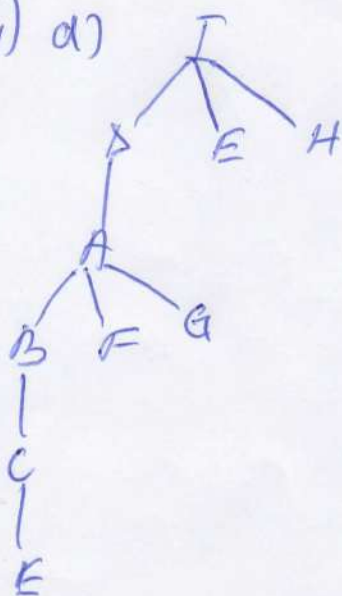

2)

3)

4) a)

b) Muchii critice: $[E-I]$, $[A-I]$ si $[C-B]$, $[D-A]$ si $[A-G]$
